

# FIELDPILOT PRO UNIPILOT PRO HEADING CALIBRATION ISSUES

Some FieldPilot Pro and UniPilot Pro users have reported problems during the Auto Calibration process where the Compass calibration step completes, but the NEXT button does not become active for the Heading step of the calibration process. This Technical bulletin details known causes and solutions for this problem.

1. If the first vehicle movement after system power on was not in the forward direction the system will not be able to accurately determine a heading, drive the vehicle forward for 500 ft /150 m or more and then restart the Auto Calibration process.
2. The vehicle must be moving within the required speed range for the Next button to be active. If the NEXT button does not become active within a few seconds of driving straight within the recommended speed range, speed up over 4 mph / 6.5 km/h for several seconds and then slow down to a speed within the recommended speed range again to make the NEXT button active. This additional step is more likely to be required when running GNSS sources with GGA Quality Indicator value '5'. e.g. TerraStar-C.

## Russian Help Text Updates

When using TeeJet console software v4.20-v4.33 with the console set to the Russian language, the help text for the Heading step in the Auto Calibration process is not as accurate it should be, and this can result in the user not understanding that the vehicle must be driven in a straight line during the Heading step of the Auto Calibration process. In advance of possible console software changes to improve the Russian language help text, the table below details the existing help text and new translations that are more accurate.

English help text	Russian help text v4.20 – v4.33	Revised Russian help text
Heading is not ready.	Направление не готово.	Калибровка направления не завершена.
Wait for heading to align with the vehicle.	Подождите, пока направляющая выровняется с машиной.	Подождите выравнивания направления компаса с машиной.
Continue driving straight.	Продолжайте ехать прямо.	Продолжайте ехать прямо.
Heading is warming up.	Система навигации разогревается.	Определение направления движения.
Heading is ready.	Система навигации готова.	Калибровка направления завершена.
Press "Next" to continue.	Нажмите «Далее» для продолжения.	Нажмите «Далее» для продолжения.
