

EGNOS change of Satellites PRN124 and PRN126

TeeJet Technologies' receivers take advantage of the EGNOS (European Geostationary Navigation Overlay Service) – Europe's free DGPS correction system. The EGNOS signal is transmitted by geostationary satellites that are completely independent of the GPS satellite system. EGNOS has changed the status of two of these geostationary satellites. The EGNOS PRN124 satellite has been changed from a TEST satellite (Type 0 messages) to an OPS satellite (Type 0/2 messages). This change took place on February 17th 2009. On February 19th the status of the EGNOS PRN126 satellite was changed from OPS to a TEST satellite. Since February 19th the EGNOS service is therefore provided from the PRN120 and the PRN124.

All TeeJet GPS products with 'Auto tune software' can handle the above PRN change automatically. Old GPS products without 'Auto tune software' are normally locked to PRN120 and PRN126 and will not be able to lock on to PRN124.

If your TeeJet GPS product doesn't have the 'Auto tune software', we recommend an update. After this update it will be able to handle future PRN changes. The update fee is €25,- excl. freight. Please contact your local TeeJet dealer and return the GPS unit along with the below form.

TeeJet GPS products without 'Auto tune software':

RX350P

Part no.: 78-50136, S/N: < 1377

RX370P

Part no.: 78-50153, S/N: < 0760

CL220 REV0 (No round connector on the rear side)

Part no.: 75-30022, S/N: All

CL220 REV1 (Round connector on the rear side)

Part no.: 75-30032, S/N: < 2260

Serial Number example:

78501361377

Part Number Serial Number

If you need help to decide if your GPS unit has the 'Auto Tune software', please contact your local TeeJet Technologies dealer or TeeJet Technologies Denmark (Phone +45 96962505 or mail support.aabybro@teejet.com).
